# Exercise 11                                                    Cursor

**Write a PL/ SQL cursor program to fetch first three records of an employee table**

**Objective:** the objective of this program is to maintain the cursor to fetch first three employees list from employee table.

**Program:**
```
declare
cursor c2 is select * from employee;
erec employee%rowtype;
begin
open c2;
loop
fetch c2 into erec;
exit when(c2%ROWCOUNT>3);
dbms_output.put_line('----------------');
dbms_output.put_line('emp_number:'||erec.emp_number);
dbms_output.put_line('emp_name:'||erec.emp_name);
end loop;
dbms_output.put_line('no. of employees:'||c2%rowcount);
close c2;
end;
```

**Expected Output:**
```
------------
emp_number: 1000
emp_name: naveen
------------
emp_number: 1001
emp_name: sureash
------------
emp_number: 1002
emp_name: chandu
------------
no. of employees: 3
```
